

Alameda County Public Health Department:

Confirmed COVID-19 and SARS-CoV-2 Positive Testing Process for Schools, Child Care Programs and Extracurricular Programs

Updated April 7, 2021

Preparedness Guidance: Assign staff within your district, school, child care or extracurricular program to track and report confirmed COVID-19 cases. This assigned staff (i.e. school nurse(s) or student service(s) staff) **will be your COVID Liaisons with Alameda County Public Health Department (ACPHD).** Develop a communication protocol for the COVID Liaisons to notify the relevant program, school, and district staff of a confirmed COVID-19 case. Prepare a letter that communicates this information to your school, child care programs, and extracurricular programs community, such as the parents and staff at the impacted site and partner organizations. When you develop your communication, be mindful of:

- Confidentiality when releasing details about the case. Balancing privacy with transparency is critical.
- Prepare a template notification letter that can easily be tailored to different cases. Translate the template letter into languages based on the identified need of each school site, district, child care programs, and extracurricular programs.
- Have proper messaging for different audiences: messages to those at impacted sites may differ from public messages.
- Avoid messages that stigmatize a site or group of people.
- Decide who will be informed and in what order, such as:
 - The District's Senior Leadership team
 - Board Members
 - Union leadership (if applicable)
 - Staff at the impacted site
 - Families of students at the impacted site
 - The School, Child Care or Extracurricular programs partner organizations.

Confirmation

- Do your best to obtain medical documentation that a confirmed COVID-19 case has occurred, but it is not necessary to obtain documentation to report a case.

Internal notification

- The school, child care program, extracurricular program and partner organization staff should immediately notify the COVID-19 Liaisons of confirmed COVID-19 cases.
- The COVID Liaisons should notify the relevant child care program, extracurricular program, school, district staff, and school Superintendent about confirmed COVID-19 cases.

Notification to ACPHD -- COVID Liaisons can notify ACPHD by email or phone, Monday-Friday 8:30 am-5:00 pm.

[Per the California Department of Public Health guidance](#), schools, child care, camps, sport organizations, and higher education institutions (e.g. Children and Youth in Congregate Settings) should notify the Alameda County Public Health Department (ACPHD) of any known case of COVID-19 among any student or employee who was present at the site **within the 10 days preceding the positive test for COVID-19:**

1. **Single confirmed case:** COVID Liaisons should email safelearning@acgov.org and/or call (510) 268-2101 if the district, school, child care program or extracurricular program has a **single confirmed COVID-19 case**. ACPHD will provide guidance and will answer any questions you have about the ACPHD COVID-19 contact investigation process and safety measures that should be followed.
2. **Outbreak:** COVID Liaisons should email safelearning@acgov.org and/or call (510) 268-2101 if the district, school, child care program or extracurricular program has a **possible outbreak**. ACPHD will help determine if the multiple cases can be defined as an outbreak and will provide guidance and answer any questions you have about the ACPHD COVID-19 contact investigation process and safety measures that should be followed.
 - CDPH defines a school, or other children and youth congregate, setting outbreak as 3 or more confirmed or probable cases of staff or students occurring within a 14-day period who are epidemiologically linked in the school, are from different households and are not contacts of each other in any other case investigation (e.g., transmission likely occurred in the school setting).
3. **Case reporting intake form:** Please use this Schools Portal for Outbreak Tracking (SPOT) [Intake Form](#) to begin the reporting process of a confirmed or suspected COVID-19 case.
 - Before completing this form, be sure you are prepared to report the COVID liaison and/or School/Child Liaison

Public Health Department: Main Line (510) 267-8000

COVID-19 Information: (510) 268-2101

contact information, location information, and date of exposure or the date the positive case was on campus while infectious.

- Cases are infectious from 2 days before symptoms begin and remain infectious for 10 days after the date that symptoms began.
 - If a case did not have any symptoms, they are infectious from 2 days before and 10 days after the date that the specimen was collected which later tested positive for SARS-CoV-2 (SARS-CoV-2 is the virus that causes COVID-19).
 - o **You should receive your SPOT login information within 48 hours of submitting your Intake Form.**
4. **Case reporting:** Once you receive your login information, report the case in the **SPOT system** within **24 hours**.
- o Be sure to have the all the necessary information for the positive case and a list of the COVID-19 case's **close contacts** ready to input into the form. **In accordance with [HIPAA Privacy and Security Rules](#), all the information provided in SPOT will remain confidential. Note the information you provide will NOT impact immigration status.**

Identify the exposed cohort and group(s) that must receive contact notification.

1. Please refer to the **Protocols for the Onset of COVID-19 Symptoms, and for Close Contact with an Individual Testing Positive for SARS-CoV-2 in a School, Child Care Setting or Extracurricular Setting** on page 7 of this document.
2. Identify the dates that the case was at the school and/or program facility while infectious.
 - o Cases are infectious from 2 days before symptoms begin and remain infectious for 10 days after the date that symptoms began.
 - o If a case did not have any symptoms, they are infectious from 2 days before and 10 days after the date that they had a specimen collected (usually a swab) for SARS-CoV-2 testing (SARS-CoV-2 is the virus that causes COVID-19).
3. Determine when the quarantine period begins for exposed contacts:
 - o Quarantine should begin the day after the last exposure to the case, while the case was infectious.
 - o Quarantine is required for a minimum of 10 days. Note that though a quarantine period of 10 days is the minimum required, 14 days of quarantine is still the safest option. Furthermore, all individuals ending quarantine before Day 14 should adhere strictly to all recommended non-pharmaceutical interventions, including wearing face coverings at all times, maintaining a distance of at least 6 feet from others, and self-monitor for COVID-19 symptoms through Day 14.
 - o If the child, student or staff member has regular **close contact** with anyone at [high risk for severe disease](#), then 14 days of quarantine is required.

Prepare the exposure letter to send to parents and staff. Provide the **date** for when the quarantine period begins. Please see Appendix A for the Exposure letter template and Appendix C for the Quarantine FAQ.

Alameda County Public Health Department Protocols for the Onset of COVID-19 Symptoms, and for Close Contact with an Individual Testing Positive for SARS-CoV-2 in a School, Child Care Setting or Extracurricular Setting

Table 1. Definition of Frequently Used Terms

A Medical Evaluator is defined as a Physician, Nurse Practitioner, or Certified Physician Assistant

SARS-CoV-2 is the virus that causes COVID-19

Exposed Group: The exposed group includes all members of the COVID-19 positive case's ("Case") stable cohort/group(*) (children, students and staff) and any additional individuals known to have been in close contact(**) with the case (within 6 feet for ≥ 15 minutes) during the case's infectious period.

***A cohort is a stable group with a fixed membership that stays together for all courses and activities (e.g., lunch, recess, etc.) and avoids contact with other persons or cohorts.**

****Close contact:** Close contact means that the child or student was within **6 feet of a COVID positive person for 15 minutes or longer** (this includes multiple shorter periods in the same day that add up to 15 minutes) **EVEN IF** both the child or student and the other person were wearing masks. **Close contact** can also mean that the child or student had a briefer but major exposure to the COVID positive person's respiratory droplets. For example, the sick person coughed directly on the child or student. Note that in some school situations, it may be challenging to determine if individuals have met these criteria, and an entire cohort/stable group, classroom, or group may need to be considered **exposed**. This is especially true if time together was spent indoors.

Table 2. Protocols		
	Action	Cohort/Stable Group/School Remains
<p>Scenario 5: Child, student, or staff member has been isolated because of symptoms and wants to return to the program before 10 days have passed without a SARS-CoV-2 test.</p>	<p>If No SARS-CoV-2 test they may return if:</p> <ul style="list-style-type: none"> • The child, student, or staff member is feeling better (symptoms do not have to be completely resolved), AND • There have been at least 24 hours with no fever, without the aid of taking medicines to lower a fever, such as acetaminophen (Tylenol) or ibuprofen (Advil or Motrin), AND • The child, student, or staff member consults a medical evaluator (a doctor, a nurse practitioner, or a certified physician assistant) to determine the significance of their symptoms. The medical evaluator will need to provide a letter indicating that the child, student, or staff member’s symptoms are NOT due to COVID- 19 (the program is <u>not allowed</u> to require disclosure of the alternative diagnosis). 	<p>Open</p> <p>Communication: No action needed</p>

<p>Scenario 6: While a child, student, or staff member is in quarantine following exposure to a case, they receive a negative test result for SARS-CoV-2.</p>	<p>Action</p> <ul style="list-style-type: none"> The child, student or staff member needs to follow quarantine instructions. Quarantine instructions from ACPHD can be viewed here. <p>If the child, student or staff member has not had symptoms, gets tested and the SARS-CoV-2 test is negative:</p> <ul style="list-style-type: none"> They must remain in quarantine for 10 days because they may develop symptoms and/or become infectious to others at any time during these 10 days. However, if they are in regular close contact with anyone at high risk for severe disease, then 14 days of quarantine is required. Quarantine instructions from ACPHD can be viewed here. <p>For those who do not develop symptoms:</p> <ul style="list-style-type: none"> For children and students testing is recommended but not required. 	<p>Open</p> <p>Communication: No action needed</p>
---	---	--

Table 2. Protocols		
	Action	Cohort/Stable Group/School Remains
	<ul style="list-style-type: none"> Advise Parents to discuss the pros and cons of testing with their child’s healthcare provider. For teachers and staff ACPHD recommends testing for SARS-CoV-2 4-10 days after the last exposure to the COVID-19 case 	

Frequently Asked Questions

1. What should a school, child care program, or extracurricular program do while a sick child, student, or staff member is waiting for SARS-CoV-2 test results or if they are not being tested?

In this situation, a school cohort/stable group, child care program, or extracurricular program should close if there is strong clinical suspicion that the person undergoing testing will test positive for SARS-CoV-2. All members of the same cohort/stable group should be told to self-quarantine until test results are available. It is advised that you quarantine the cohort/stable group and close contacts if:

- There is a known exposure to a confirmed case, and the suspected case has **two** of the following symptoms:
 - Fever (measured or subjective)
 - Chills
 - Rigors
 - Myalgia

- Headache
 - Sore throat
 - Nausea or vomiting
 - Diarrhea
 - Fatigue
 - Congestion or runny nose
- There is a known exposure to a confirmed case, and the suspected case has **one** of the following symptoms:
 - Cough
 - Shortness of breath
 - Difficulty breathing
 - New olfactory disorder
 - New taste disorder

Please refer to the **close contact** definition above for determining exposure. If the child, student or staff member has highly specific symptoms of COVID-19, please call the department of public health for a consult. Email safelearning@acgov.org or call Alameda County Public Health Department (ACPHD) at **510-268-2101** with any questions that you may have. Closing decisions should be made in consultation with ACPHD.

2. Does a sibling of a child who is home with COVID-19 symptoms need to Quarantine?

No, not necessarily. If the child or student that is home with symptoms meets the above criteria for a strong clinical suspicion of a positive case than yes, the sibling of the child or student and all close contacts should quarantine. However, if the child or student that is home does not meet the above criteria for a strong clinical suspicion of a positive case, then the siblings does not need to quarantine.

Template Letter for STAFF, or for PARENT or GUARDIAN of student or child. To be placed on school/facility/program letterhead

Date: Click or tap here to enter text.

Dear: Click or tap here to enter text.

Click or tap here to enter text. May have been exposed to a person with COVID-19 who was present at Click or tap here to enter text., from the dates of Click or tap here to enter text.. We are working closely with the Alameda County Public Health Department (ACPHD).

WHAT YOU SHOULD DO

- **Stay home and do not have any visitors. You or the child or student** will be under home quarantine through the **dates of** Click or tap here to enter text.. Quarantine is for at least 10 days after the date of exposure at Click or tap here to enter text., unless there is regular **Close Contact** with someone at [high risk for severe disease](#), then 14 days of Quarantine after the date of last exposure is required. View the quarantine FAQ [here](#) for quarantine instructions.
- ☐ **Monitor yourself or the child or student** for fever or COVID-19 symptoms through the **dates of** Click or tap here to enter text.. **Please monitor for:**
 - o Fever (Alameda County defines a fever as greater than 100°F/37.8°C)
 - o Cough
 - o Shortness of breath
 - o Any other symptoms such as chills, body aches, fatigue, sore throat, headache, runny nose or nasal congestion, loss of taste or smell, nausea, vomiting or diarrhea. More information about symptoms can be viewed [here](#).
- ☐ **If** Click or tap here to enter text. becomes sick, has a fever, or develop any of the symptoms listed above, please contact your healthcare provider to see if testing for SARS-CoV-2 is recommended.
- ☐ Even if no symptoms are developed, ACPHD recommends that teachers, school, or program staff obtain SARS-CoV-2 testing 4-10 days following exposure.

Public Health Department: Main Line (510) 267-8000

COVID-19 Information: (510) 268-2101

- o If you, the child or student test **NEGATIVE** for SARS-CoV-2, you must still stay in home quarantine for a minimum of 10 days through the **dates of** [Click or tap here to enter text.](#)
- o If you, the child or student test **POSITIVE** for SARS-CoV-2, follow isolation instructions and stay home and away from others for 10 days with at least 24 hours of symptom improvement.
- o More information about what to do if you are sick with COVID-19 symptoms can be viewed [here](#).
- o Parents and guardians of children or students are advised to discuss the pros and cons of testing with the child's healthcare provider.

? **If** [Click or tap here to enter text.](#) requires urgent medical attention, please call the healthcare facility where you will be seen **BEFORE** you leave home and tell them that you may have been exposed to COVID-19. If you have a medical emergency and you need to call 911, notify the dispatcher that you may have been exposed to COVID-19.

PEOPLE AT HIGHER RISK OF SEVERE COVID-19 INFECTION

- ? Older adults and people with **serious medical conditions like heart disease, diabetes, lung disease, or a weakened immune system** may become seriously ill with COVID-19.
- ? [Click or tap here to enter text.](#) **is** in a **higher risk group, please review the CDC guidance** [here](#).

If you have any questions, please call the Alameda County Public Health Department at 510-268-2101.

Appendix B: Isolation Infographic

Tips **When Can I Leave Isolation?**

I think or know I have COVID-19, and I have symptoms. When can I leave isolation?

You can be around others after:

- 10 days since your symptoms first appeared **and**
- 24 hours with no fever **and**
- Your COVID-19 symptoms have improved.

I tested positive for COVID-19, but I've never had any symptoms. When can I leave isolation?

Stay at home and stay away from others until 10 days have passed since your positive test.

Day zero (0) is your first day of symptoms or the day you were tested.

On day 11 you can leave isolation.*

You do not need a negative test to leave isolation or return to work.

**A small number of people should isolate for 20 days when told to do so by their doctor.*

Appendix C: Quarantine FAQ

FAQs

How Long Should I Stay in Quarantine?

The California Department of Public Health has released updated [COVID-19 quarantine guidance](#) based on the CDC's guidance.

The Alameda County Health Officer Order on quarantine can be found [here](#).

What is quarantine?

Quarantine keeps someone who might have been exposed to SARS-CoV-2, the virus that causes COVID-19, away from others.

Who needs to quarantine?

[Close Contact](#)¹ means that you were **within 6 feet of a COVID-19 positive person for a total of 15 minutes or longer**, EVEN IF both of you were wearing masks. Shorter periods that add up to 15 minutes on the same day also count. Close Contact can also mean that you had a briefer but major exposure to the COVID-19 positive person's respiratory droplets. For example, the sick person coughed directly on you.

A person who has had COVID-19, or tested positive for SARS-CoV-2, does NOT need to quarantine or get tested again for up to 3 months after the end of isolation, as long as they don't have [symptoms](#). Anyone who develops symptoms within 3 months may need to be tested again and should contact their healthcare provider.

Should I get testing during quarantine?

If symptoms develop during quarantine, you should get tested. Even if you do not develop symptoms, ACPHD recommends testing for SARS-CoV-2 between 4 and 10 days after a Close Contact.

Who should quarantine for 14 days?

A quarantine period of 14 days is still the **safest** option. This is especially important if you are in regular Close Contact with anyone at [high risk for severe disease](#), such as someone who is immunocompromised. If you live or work in any of the following places, you must quarantine for 14 days after your last exposure:

- Long-term care facilities (LTCF)²
- Correctional facilities
- Single Room Occupancy (SRO) hotels
- Dormitories Shelters for unhoused persons

The last day of Close Contact with an infected person is called "Day 0". If you have no symptoms and your test is negative (if tested), your 14-day quarantine ends on Day 15. For example, if your last Close Contact was on January 1st, the first day of quarantine is January 2nd and the last day is January 15th.

¹ Healthcare providers should continue to follow [risk assessment guidance](#) from the CDC.

² LTCF experiencing a critical staffing shortage during an outbreak should consult with ACPHD for additional quarantine guidance.

FAQs

How Long Should I Stay in Quarantine?

Who can end quarantine after 10 days?

If you are not in regular Close Contact with anyone at high risk for severe disease AND you have not had any symptoms, you may end quarantine 10 days after your last exposure. For example, if your last Close Contact was on January 1st, the first day of a 10-day quarantine is January 2nd and the last day is January 11th.

If you quarantine for less than 14 days, you MUST:

1. Monitor yourself for COVID-19 symptoms for the full 14 days. If you develop symptoms, immediately self-isolate, contact your healthcare provider, and get tested.
2. Use a face covering and stay at least 6 feet from others when outside your home for the full 14 days.

Who can end quarantine after 7 days?

During a **critical staffing shortage**³ health care personnel (HCP)⁴, emergency response workers, and social service workers who work face-to-face with clients in the child welfare system or in assisted living facilities may return to work 7 days **after their last exposure**. You MUST have a negative PCR test performed after Day 5 AND not have had any [symptoms](#) of COVID-19. For example, if the last Close Contact was on January 1st, the first day of a 7-day quarantine is January 2nd and the last day is January 8th, with testing done after January 6th.

³ Critical staffing shortages occur when there are no longer enough staff to provide safe patient, resident, or inmate care. When a critical staffing shortage occurs in a health care setting, facilities should strongly consider cancelling non-essential visits and procedures, adjusting staff schedules, cancelling, or delaying employee leave, hiring additional HCP, and rotating HCP to positions that support patient care activities. More information on critical staffing shortages can be found in CDC's [Strategies to Mitigate Healthcare Personnel Staffing Shortages](#).

⁴ Health Care Personnel are defined as persons, both paid and unpaid, working in patient care areas who could be exposed to infectious agents (e.g., blood, tissue, body fluids as well as contaminated equipment, surfaces, or air). HCP should be considered exposed at work using CDC's [Guidance for Risk Assessment and Work Restrictions for Healthcare Personnel with Potential Exposure to COVID-19](#).

Here are some exceptions:

1. If you work in a health care setting **experiencing an outbreak** (i.e., suspected or confirmed transmission), ACPHD may recommend that you quarantine for the full 14 days.
2. If you work in a setting where you care for **severely immunosuppressed patients** (e.g., those with bone marrow or solid organ transplants or undergoing chemotherapy), you should be reassigned temporarily and complete the full 14-day quarantine.

If you quarantine for less than 10 days, you MUST:

1. Wear a surgical face mask **at all times** while at work for the full 14 days.
2. Monitor yourself for COVID-19 symptoms for the full 14 days. **If you develop symptoms, immediately self-isolate, contact your healthcare provider, and get tested.**
3. Use a face covering and stay at least 6 feet from others when outside your home for the full 14 days.

During critical staffing shortages, some people working in the public safety sector (for example, law enforcement and firefighter EMTs) may need to return to work before the end of quarantine. For more information about these special situations, please see [Alameda County Health Officer Order 20-06](#).
