

# Post-Vaccine Symptoms Guidance

What to do if you are feeling symptoms after your vaccine

This guidance is for symptomatic employees/workers who have received a **COVID-19 vaccine within the past 5 days** (day-1 is the day of vaccination) and have NOT had a close contact with a COVID-19+ person during the previous 14 days. Employees/workers who are symptomatic post-vaccine and are **within 14 days of a close contact** should be excluded from work and evaluated by a health care provider (HCP) for SARS-CoV-2 infection.

Anyone with symptoms of COVID-19 that begin on or after day 6 post-vaccination (1st or 2nd dose) should be excluded from work and evaluated by a health care provider for SARS-CoV-2 infection.

**Vaccinated employees/workers should continue to be tested as part of routine screening.** However, if resources are strained (i.e., not enough testing kits), unvaccinated personnel should be prioritized for testing.
